## Manual symbols:

{ } = choose from

[ ] = optional

| = choice separator

/ = continuous choice separator

... = continue

## Syntax:

- Commands are separated by newlines or colons.
- Command, function, and variable names are not case sensitive.
- Variable names are allowed to contain A-Z, 0-9, #, \$, %, !, ?, @, and \_.
- Variables must have at least one non numeric valid character to be a valid name.
- Variables can be addressed as an array by appending a [, the element index, and a ] to the end of the variable name.
- Function names are allowed to contain the same characters as variable names.
- Functions can be called by adding (, a comma separated list of arguments, and a ) to the end of a function name.
- Arguments are separated by commas.
- Adding a comma with nothing after it will count as a argument but the command/function will be aware that the argument is empty.
- Strings must have one " to begin and another " to end.
- Strings can only be added together.
- Numbers can include . And 0-9.
- Logic compares must have blocks of a value, a =, >, <, >=, <=, ==, <=, or <>, and another value. These blocks must be separated by a &, or |.
- A whole number greater or equal to 0 may be prefixed before a command to indicate a line number.

## Behavior:

- All file I/O functions and commands set an internal variable which can be queried using the `_FILEERROR()` function.
- Command, function, variable, and label names are case insensitive and are internally converted into upper-case before interpretation.
- For performance purposes, strings are not bounds-checked to be larger than `CB_BUF_SIZE` and counters/pointers are not checked to prevent `int/int32_t` overflow.
- On Unix-based systems such as Linux, to mimic the Windows behavior of opening CLIBASIC in a console window, CLIBASIC will attempt to open in xterm if `GUI_CHECK` is defined.
- On Windows, due to lack of a better solution, the `EXEC` command and `EXEC()` and `EXEC$()` functions are passed through `system()` and will be interpreted by CMD which can be insecure and/or buggy.
